Yakama Nation Fisheries is seeking proposals from qualified engineering firms to award a design and engineering services contract in support of salmon habitat restoration activities taking place in the Entiat River in Chelan County, Washington. Based upon the proposals received under this solicitation the Confederated Tribes and Bands of the Yakama Nation will award a design contract to the best quality bidder for the Scope of Work described within this RFP. Services rendered under this contract will be performed from contract start date (to be determined) through December 31, 2019.

Project Background

Yakama Nation Fisheries is developing salmon and steelhead habitat restoration projects throughout the Entiat Subbasin in Chelan County, WA. The Upper Burns & Angle Point Project, located in the Upper Middle Entiat reach also known as the "Stillwaters", has been identified as a high priority area for implementing restoration actions. The project is located between river miles (RM) 25.8-26.7 along the mainstem Entiat River and is owned by two landowners, the United States Forest Service (USFS) and the Chelan Douglas Land Trust (CDLT). The contract resulting from this RFP will be for development permit level designs and updated design report based upon existing conceptual designs. The existing designs and conceptual design report can be reviewed using the following link:

Project Location Map

Proposed Scope of Work

Phase 3: Draft Construction Plan

Task 7 - Design level survey (if additional survey is needed)

As agreed to between the Yakama Nation project manager and the contractor, supplementary site survey may be completed to gather additional field data on existing conditions so that robust restoration designs can begin to be produced. Supplementary surveys may include further topographic/bathymetric surveys, groundwater testing, and/or geologic surveys, among other things.

Task 8 – Development of Permit Level Construction Plan

The contractor will proceed with producing engineered designs of the preferred restoration concept(s) as directed by UCHRP staff. Design deliverables provided under this task will provide suitable detail to allow for environmental permits to be acquired for the project (includes accurate depiction of areas being impacted and estimates of material quantities). Please refer to the attached HIP III Checklist for an overview of the design and data criterion needed to obtain the necessary permits.

Task 9 - Stakeholder Meetings and Communications

If requested, the contractor will assist in presenting the Phase 3 Construction Drawing Set to landowners and agency stakeholders for additional feedback and buy-in.

Phase 4: Final Construction Plan

Task 10 - Development of Final Construction Plan

Based on further direction from UCHRP staff, the contractor will produce final stamped designs of the project (includes construction specs and engineer's stamp - should be usable for producing bid document).

Task 11 - Create and Provide a Design Report

Contractor will prepare a Design Report for each project that gets installed under this contract. The Design Report will summarize project goals, field data collection, and technical design of the project including site survey, hydrology, hydraulics, grading, anchoring, and quantities/totals. A draft report will be provided for review, comment, and feedback. Revisions will be made to finalize the report.

Task 12 - Stakeholder Meetings and Communications

If requested, the contractor will assist in presenting the Phase 4 Construction Drawing Set to landowners and agency stakeholders.

HIP III General Project and Data Summary Requirements

Chapter 2: Required Information (GPDSR).

Planning and design documentation of conservation practices should effectively communicate that appropriate planning, analysis, design, and resulting construction documentation are met. The project documentation should provide other persons the means of quickly following the rationale used in determining all features of a design including the design objective(s), data, criteria, assumptions, procedures, and decisions used in the designs, specifications and details.

A design report should be included as part of any engineering design contract. It is not an additional or separate action. Monitoring and Adaptive Management Plans, however, can be a separate additional item but should not be very expensive because we have templates available and most of the information is copied directly out of the design report.

The GPDSR (General Project and Data Summary Requirements) serves as the design submittal framework that is needed to assess and evaluate the adequacy of the proposed project. The GPDSR criteria were developed using the River Restoration Analysis Tool (RiverRAT) and address the 16 overarching questions proposed within the RiverRAT Framework.

The RRT will review submitted GPDSR documents to determine if the technical deliverables provided are:

1. Adequate for functionality (adherence to HIP III Conservation Measures), and
2. Adequate for technical quality (competent execution of design and project plans – contract documents).

A GPDSR basis of design report template is available and follows the outline below.

Project Background.

1. Name and titles of sponsor, firms, and individuals responsible for design
2. List of project elements that have been designed by a licensed Professional Engineer
3. Identification and description of risk to infrastructure or existing resources
4. Explanation and background on fisheries use (by life stage - period) and limiting factors addressed by project
5. List of primary project features including constructed or natural elements
6. Description of performance/sustainability criteria for project elements, assessment of risk of failure to perform, potential consequences, and compensating analysis to reduce uncertainty
7. Description of disturbance including timing, areal extent, as well as potential impacts associated with implementation of each project element

EXHIBIT A – SCOPE OF WORK

Background

Yakama Nation Fisheries has developed a salmon and steelhead habitat restoration project in the Entiat Subbasin in Chelan County, WA, known as the Upper Burns & Angle Point Habitat Enhancement Project. Under a previous consultant agreement conceptual plans were developed for this site, as well as a draft basis of design report. The contractor will take the conceptual plans and report to create both final plans suitable for permitting and construction implementation, and an updated design report.

Yakama Nation Fisheries has been working closely with the landowners in the project area, including the United States Forest Service and private parcels. The contractor will work to incorporate comments and feedback from local stakeholders to create the final plans and reports. Stakeholder comments may require some design changes from the conceptual phase.

Project Location

The Upper Burns & Angle Point Habitat Enhancement Project is located in the Upper Middle Entiat reach of the Entiat River between river miles (RM) 25.8-26.7.

Work Tasks

The contractor shall perform the following activities:

Phase 3: Draft Construction Plan

Task 7 - Design level survey (if additional survey is needed)

As agreed to between the Yakama Nation project manager and the contractor, supplementary site survey may be completed to gather additional field data on existing conditions so that robust restoration designs can begin to be produced. Supplementary surveys may include further topographic/bathymetric surveys, groundwater testing, and/or geologic surveys, among other things.

Task 8 – Development of Permit Level Construction Plan

The contractor will proceed with producing engineered designs of the preferred restoration concept(s) as directed by UCHRP staff. Design deliverables provided under this task will provide suitable detail to allow for environmental permits to be acquired for the project (includes accurate depiction of areas being impacted and estimates of material quantities). Please refer to the attached HIP III Checklist for an overview of the design and data criterion needed to obtain the necessary permits.

Task 9 - Stakeholder Meetings and Communications

If requested, the contractor will assist in presenting the Phase 3 Construction Drawing Set to landowners and agency stakeholders for additional feedback and buy-in.

Phase 4: Final Construction Plan

Task 10 - Development of Final Construction Plan

Based on further direction from UCHRP staff, the contractor will produce final stamped designs of the project (includes construction specs and engineer's stamp - should be usable for producing bid document).

Task 11 - Create and Provide a Design Report

Contractor will prepare a Design Report for each project that gets installed under this contract. The Design Report will summarize project goals, field data collection, and technical design of the project including site survey, hydrology, hydraulics, grading, anchoring, and quantities/totals. A draft report will be provided for review, comment, and feedback. Revisions will be made to finalize the report.

OLC 1.22.18

Task 12 - Stakeholder Meetings and Communications
