HIP GENERAL CONSERVATION MEASURES APPLICABLE TO ALL ACTIONS

THE ACTIVITIES COVERED UNDER THE HIP ARE INTENDED TO PROTECT AND RESTORE FISH AND WILDLIFE HABITAT WITH LONG-TERM BENEFITS TO ESA-LISTED SPECIES. THE FOLLOWING GENERAL CONSERVATION MEASURES (DEVELOPED IN COORDINATION WITH USFWS AND NMFS) WILL BE APPLIED TO ALL ACTIONS OF THIS PROJECT.

PROJECT DESIGN AND SITE PREPARATION.

1. STATE AND FEDERAL PERMITS.

- A. ALL APPLICABLE REGULATORY PERMITS AND OFFICIAL PROJECT AUTHORIZATIONS WILL BE OBTAINED BEFORE PROJECT IMPLEMENTATION.
 - B. THESE PERMITS AND AUTHORIZATIONS INCLUDE, BUT ARE NOT LIMITED TO, NATIONAL ENVIRONMENTAL POLICY ACT, NATIONAL HISTORIC PRESERVATION ACT, THE APPROPRIATE STATE AGENCY REMOVAL AND FILL PERMIT, USACE CLEAN WATER ACT (CWA) 404 PERMITS, CWA SECTION 401 WATER QUALITY CERTIFICATIONS, AND FEMA NO-RISE ANALYSES.
2. TIMING OF IN-WATER WORK.
- A. APPROPRIATE STATE (OREGON DEPARTMENT OF FISH AND WILDLIFE (ODFW), WASHINGTON DEPARTMENT OF FISH AND WILDLIFE (WDFW), IDAHO DEPARTMENT OF FISH AND GAME (IDFG), AND MONTANA FISH WILDLIFE AND PARKS (MFWP)) GUIDELINES FOR TIMING OF IN-WATER WORK WINDOWS (IWW) WILL BE FOLLOWED.
 - B. CHANGES TO ESTABLISHED WORK WINDOWS WILL BE APPROVED BY REGIONAL STATE BIOLOGISTS AND BPA'S EC LEAD.
 - C. BULL TROUT. FOR AREAS WITH DESIGNATED IN-WATER WORK WINDOWS FOR BULL TROUT OR AREAS KNOWN TO HAVE BULL TROUT, PROJECT PROPONENTS WILL CONTACT THE APPROPRIATE USFWS FIELD OFFICE TO INSURE THAT ALL REASONABLE IMPLEMENTATION MEASURES ARE CONSIDERED AND AN APPROPRIATE IN-WATER WORK WINDOW IS BEING USED TO MINIMIZE PROJECT EFFECTS.
 - D. LAMPREY. WORKING IN STREAM OR RIVER CHANNELS THAT CONTAIN PACIFIC LAMPREY WILL BE AVOIDED FROM MARCH 1 TO JULY 1 FOR REACHES <5,000 FEET IN ELEVATION AND FROM MARCH 1 TO AUGUST 1 FOR REACHES >5,000 FEET. IF EITHER TIMEFRAME IS INCOMPATIBLE WITH OTHER OBJECTIVES, THE AREA WILL BE SURVEYED FOR NESTS AND LAMPREY PRESENCE, AND AVOIDED IF POSSIBLE. IF LAMPREYS ARE KNOWN TO EXIST, THE PROJECT SPONSOR WILL UTILIZE DEWATERING AND SALVAGE PROCEDURES (SEE FISH SALVAGE AND ELECTROFISHING SECTIONS) TO MINIMIZE ADVERSE EFFECTS.
 - E. THE IN-WATER WORK WINDOW IS JULY 1- OCTOBER 30.

3. CONTAMINANTS.

- A. EXCAVATION OF MORE THAN 20 CUBIC YARDS WILL REQUIRE A SITE VISIT AND DOCUMENTED ASSESSMENT FOR POTENTIAL CONTAMINANT SOURCES. THE SITE ASSESSMENT WILL BE STORED WITH PROJECT FILES OR AS AN APPENDIX TO THE BASIS OF DESIGN REPORT.
- B. THE SITE ASSESSMENT WILL SUMMARIZE:
 1. THE SITE VISIT, CONDITION OF THE PROPERTY, AND IDENTIFICATION OF ANY AREAS USED FOR VARIOUS INDUSTRIAL PROCESSES;
 2. AVAILABLE RECORDS, SUCH AS FORMER SITE USE, BUILDING PLANS, AND RECORDS OF ANY PRIOR CONTAMINATION EVENTS;
 3. INTERVIEWS WITH KNOWLEDGEABLE PEOPLE, SUCH AS SITE OWNERS, OPERATORS, OCCUPANTS, NEIGHBORS, OR LOCAL GOVERNMENT OFFICIALS; AND
 4. THE TYPE, QUANTITY, AND EXTENT OF ANY POTENTIAL CONTAMINATION SOURCES.

4. SITE LAYOUT AND FLAGGING.

- A. CONSTRUCTION AREAS TO BE CLEARLY FLAGGED PRIOR TO CONSTRUCTION.
- B. AREAS TO BE FLAGGED WILL INCLUDE:
1. SENSITIVE RESOURCE AREAS, SUCH AS AREAS BELOW ORDINARY HIGH WATER, SPAWNING AREAS, SPRINGS, AND WETLANDS;
 2. EQUIPMENT ENTRY AND EXIT POINTS;
 3. ROAD AND STREAM CROSSING ALIGNMENTS;

- B. VEHICLE USE AND HUMAN ACTIVITIES, INCLUDING WALKING, IN AREAS OCCUPIED BY TERRESTRIAL ESA-LISTED SPECIES WILL BE MINIMIZED.
- C. TEMPORARY ACCESS ROADS AND PATHS WILL NOT BE BUILT ON SLOPES WHERE GRADE, SOIL, OR OTHER FEATURES SUGGEST A LIKELIHOOD OF EXCESSIVE EROSION OR FAILURE. IF SLOPES ARE STEEPER THAN 30%, THEN THE ROAD WILL BE DESIGNED BY A CIVIL ENGINEER WITH EXPERIENCE IN STEEP ROAD DESIGN.
- D. THE REMOVAL OF RIPARIAN VEGETATION DURING CONSTRUCTION OF TEMPORARY ACCESS ROADS WILL BE MINIMIZED. WHEN TEMPORARY VEGETATION REMOVAL IS REQUIRED, VEGETATION WILL BE CUT AT GROUND LEVEL (NOT GRUBBED).
- E. AT PROJECT COMPLETION, ALL TEMPORARY ACCESS ROADS AND PATHS WILL BE OBLITERATED, AND THE SOIL WILL BE STABILIZED AND REVEGETATED. ROAD AND PATH OBLITERATION REFERS TO THE MOST COMPREHENSIVE DEGREE OF DECOMMISSIONING AND INVOLVES DECOMPACTING THE SURFACE AND DITCH, PULLING THE FILL MATERIAL ONTO THE RUNNING SURFACE, AND RESHAPING TO MATCH THE ORIGINAL CONTOUR.
- F. HELICOPTER FLIGHT PATTERNS WILL BE ESTABLISHED IN ADVANCE AND LOCATED TO AVOID TERRESTRIAL ESA-LISTED SPECIES AND THEIR OCCUPIED HABITAT DURING SENSITIVE LIFE STAGES.

- C. FOR PROJECTS THAT REQUIRE EQUIPMENT AND VEHICLES TO CROSS IN THE WET:
 - 1. THE LOCATION AND NUMBER OF ALL WET CROSSINGS SHALL BE APPROVED BY THE BPA EC LEAD AND DOCUMENTED IN THE CONSTRUCTION PLANS;
 - 2. VEHICLES AND MACHINERY SHALL CROSS STREAMS AT RIGHT ANGLES TO THE MAIN CHANNEL WHENEVER POSSIBLE;

- D. BIODEGRADABLE LUBRICANTS AND FLUIDS WILL BE USED ON EQUIPMENT OPERATING IN AND ADJACENT TO THE STREAM CHANNEL AND LIVE WATER.
- E. EQUIPMENT WILL BE INSPECTED DAILY FOR FLUID LEAKS BEFORE LEAVING THE VEHICLE STAGING AREA FOR OPERATION WITHIN 150 FEET OF ANY NATURAL WATER BODY OR WETLAND.
- F. EQUIPMENT WILL BE THOROUGHLY CLEANED BEFORE OPERATION BELOW ORDINARY HIGH WATER, AND AS OFTEN AS NECESSARY DURING OPERATION, TO REMAIN GREASE FREE.

9. EROSION CONTROL.

- A. TEMPORARY EROSION CONTROL MEASURES INCLUDE:
 - 1. TEMPORARY EROSION CONTROLS WILL BE IN PLACE BEFORE ANY SIGNIFICANT ALTERATION OF THE ACTION SITE AND APPROPRIATELY INSTALLED DOWNSLOPE OF PROJECT ACTIVITY WITHIN THE RIPARIAN BUFFER AREA UNTIL SITE REHABILITATION IS COMPLETE;

- B. EMERGENCY EROSION CONTROLS. THE FOLLOWING MATERIALS FOR EMERGENCY EROSION CONTROL WILL BE AVAILABLE AT THE WORK SITE:
 - 1. A SUPPLY OF SEDIMENT CONTROL MATERIALS; AND
 - 2. AN OIL-ABSORBING FLOATING BOOM WHENEVER SURFACE WATER IS PRESENT.

10. DUST ABATEMENT.

- A. THE PROJECT SPONSOR WILL DETERMINE THE APPROPRIATE DUST CONTROL MEASURES BY CONSIDERING SOIL TYPE, EQUIPMENT USAGE, PREVAILING WIND DIRECTION, AND THE EFFECTS CAUSED BY OTHER EROSION AND SEDIMENT CONTROL MEASURES.
- B. WORK WILL BE SEQUENCED AND SCHEDULED TO REDUCE EXPOSED BARE SOIL SUBJECT TO WIND EROSION.
- C. DUST-ABATEMENT ADDITIVES AND STABILIZATION CHEMICALS (TYPICALLY MAGNESIUM CHLORIDE, CALCIUM CHLORIDE SALTS, OR LIGNINSULFONATE) WILL NOT BE APPLIED WITHIN 25 FEET OF WATER OR A STREAM CHANNEL AND WILL BE APPLIED SO AS TO MINIMIZE THE LIKELIHOOD THAT THEY WILL ENTER STREAMS. APPLICATIONS OF LIGNINSULFONATE WILL BE LIMITED TO A MAXIMUM RATE OF 0.5 GALLONS PER SQUARE YARD OF ROAD SURFACE, ASSUMING MIXED 50:50 WITH WATER.
- D. APPLICATION OF DUST ABATEMENT CHEMICALS WILL BE AVOIDED DURING OR JUST BEFORE WET WEATHER, AND AT STREAM CROSSINGS OR OTHER AREAS THAT COULD RESULT IN UNFILTERED DELIVERY OF THE DUST ABATEMENT MATERIALS TO A WATERBODY (TYPICALLY THESE WOULD BE AREAS WITHIN 25 FEET OF A WATERBODY OR STREAM CHANNEL; DISTANCES MAY BE GREATER WHERE VEGETATION IS SPARSE OR SLOPES ARE STEEP).

- D. DISSIPATION OF FLOW ENERGY AT THE BYPASS OUTFLOW WILL BE PROVIDED TO PREVENT DAMAGE TO THE STREAM CHANNEL AND RIPARIAN VEGETATION.
- E. SEEPAGE WATER WILL BE PUMPED TO A TEMPORARY STORAGE AND TREATMENT SITE OF INTO UPLAND AREAS TO ALLOW WATER TO PERCOLATE THROUGH SOIL AND VEGETATION PRIOR TO REENTERING THE STREAM CHANNEL.

CONSTRUCTION AND POST CONSTRUCTION CONSERVATION MEASURES.

1. FISH PASSAGE.

- A. FISH PASSAGE WILL BE PROVIDED FOR ADULT AND JUVENILE FISH LIKELY TO BE PRESENT DURING CONSTRUCTION UNLESS PASSAGE DID NOT EXIST BEFORE CONSTRUCTION, THE STREAM IS NATURALLY IMPASSABLE, OR PASSAGE WILL NEGATIVELY IMPACT ESA-LISTED SPECIES OR THEIR HABITAT.

- A. EARTHWORK REQUIRING IN-STREAM MECHANIZED EQUIPMENT (INCLUDING DRILLING, EXCAVATION, DREDGING, FILLING, AND COMPACTING) WILL BE COMPLETED AS QUICKLY AS POSSIBLE.
- B. MECHANIZED EQUIPMENT WILL WORK FROM TOP OF BANK UNLESS WORK FROM ANOTHER LOCATION WILL RESULT IN LESS HABITAT DISTURBANCE (TURBIDITY, VEGETATION DISTURBANCE, ETC.).

4. CESSATION OF WORK.

- A. PROJECT OPERATIONS WILL CEASE WHEN HIGH FLOW CONDITIONS MAY RESULT IN INUNDATION OF THE PROJECT AREA (FLOOD EFFORTS TO DECREASE DAMAGES TO NATURAL RESOURCES PERMITTED).
- B. WATER QUALITY LEVELS EXCEEDED. SEE CWA SECTION 401 WATER QUALITY CERTIFICATION AND TURBIDITY MEASURES.

5. SITE RESTORATION.

- A. DISTURBED AREAS, STREAM BANKS, SOILS, AND VEGETATION WILL BE CLEANED UP AND RESTORED TO IMPROVED OR PRE-PROJECT CONDITIONS.

6. REVEGETATION.

- A. PLANTING AND SEEDING WILL OCCUR PRIOR TO OR AT THE BEGINNING OF THE FIRST GROWING SEASON AFTER CONSTRUCTION.

- B. A MIX OF NATIVE SPECIES (INVASIVE SPECIES NOT ALLOWED) APPROPRIATE TO THE SITE WILL BE USED TO REESTABLISH VEGETATION, PROVIDE SHADE, AND REDUCE EROSION. REESTABLISHED VEGETATION SHOULD BE AT LEAST 70% OF PRE-PROJECT CONDITIONS WITHIN THREE YEARS.
- C. VEGETATION SUCH AS WILLOWS, SEDGES, OR RUSH MATS WILL BE SALVAGED FROM DISTURBED OR ABANDONED AREAS TO BE REPLANTED.
- D. SHORT-TERM STABILIZATION MEASURE MAY INCLUDE THE USE OF NON-NATIVE STERILE SEED MIX (WHEN NATIVE NOT AVAILABLE), WEED-FREE CERTIFIED STRAW, OR OTHER SIMILAR TECHNIQUES.
- E. SURFACE FERTILIZER WILL NOT BE APPLIED WITHIN 50 FEET OF ANY STREAM, WATE BODY, OR WETLAND.
- F. FENCING WILL BE INSTALLED AS NECESSARY TO PREVENT ACCESS TO REVEGETATED SITES BY LIVESTOCK OR UNAUTHORIZED PERSONS.
- G. INVASIVE PLANTS WILL BE REMOVED OR CONTROLLED UNTIL NATIVE PLANT SPECIES ARE WELL ESTABLISHED (TYPICALLY THREE YEARS POST-CONSTRUCTION).

7. SITE ACCESS AND IMPLEMENTATION MONITORING.

STAGED REWATERING PLAN.

- A. WHEN REINTRODUCING WATER TO DEWATERED AREAS AND NEWLY CONSTRUCTED CHANNELS, A STAGED REWATERING PLAN WILL BE APPLIED.
- B. THE FOLLOWING WILL BE APPLIED TO ALL REWATERING EFFORTS. COMPLEX REWATERING EFFORTS MAY REQUIRE ADDITIONAL NOTES OR A DEDICATED SHEET IN THE CONSTRUCTION DETAILS.
 - 1. TURBIDITY MONITORING PROTOCOL WILL BE APPLIED TO REWATERING EFFORTS.
 - 2. PRE-WASH THE AREA BEFORE REWATERING. TURBID WASH WATER WILL BE DETAINED AND PUMPED TO THE FLOODPLAIN OR SEDIMENT CAPTURE AREAS RATHER THAN DISCHARGING TO FISH-BEARING STREAMS.
 - 3. INSTALL SEINE NETS AT UPSTREAM END TO PREVENT FISH FROM MOVING DOWNSTREAM UNTIL 2/3 OF TOTAL FLOW IS RESTORED TO THE CHANNEL.
 - 4. STARTING IN EARLY MORNING INTRODUCE 1/3 OF NEW CHANNEL FLOW OVER PERIOD OF 1-2 HOURS.
 - 5. INTRODUCE SECOND THIRD OF FLOW OVER NEXT 1 TO 2 HOURS AND BEGIN FISH SALVAGE OF BYPASS CHANNEL IF FISH ARE PRESENT.
 - 6. REMOVE UPSTREAM SEINE NETS ONCE 2/3 FLOW IN REWATERED CHANNEL AND DOWNSTREAM TURBIDITY IS WITHIN ACCEPTABLE RANGE (LESS THAN 40 NTU OR LESS THAN 10% BACKGROUND).
 - 7. INTRODUCE FINAL THIRD OF FLOW ONCE FISH SALVAGE EFFORTS ARE COMPLETE AND DOWNSTREAM TURBIDITY VERIFIED TO BE WITHIN ACCEPTABLE RANGE.
 - 8. INSTALL PLUG TO BLOCK FLOW INTO OLD CHANNEL OR BYPASS. REMOVE ANY REMAINING SEINE NETS.
 - 9. IN LAMPREY SYSTEMS, LAMPREY SALVAGE AND DRY SHOCKING MAY BE NECESSARY.

TURBIDITY MONITORING.

- A. RECORD THE READING, LOCATION, AND TIME FOR THE BACKGROUND READING APPROXIMATELY 100 FEET UPSTREAM OF THE PROJECT AREA USING A RECENTLY CALIBRATED TURBIDIMETER OR VIA VISUAL OBSERVATION (SEE THE HIP HANDBOOK TURBIDITY MONITORING SECTION FOR A VISUAL OBSERVATION KEY).
- B. RECORD THE TURBIDITY READING, LOCATION, AND TIME AT THE MEASUREMENT COMPLIANCE LOCATION POINT.

 2. 100 FEET DOWNSTREAM FOR STREAMS BETWEEN 30 AND 100 FEET WIDE.
 3. 200 FEET DOWNSTREAM FOR STREAMS GREATER THAN 100 FEET WIDE.
 4. 300 FEET FROM THE DISCHARGE POINT OR NONPOINT SOURCE FOR LOCATIONS SUBJECT TO TIDAL OR COASTAL SCOUR.
- C. TURBIDITY SHALL BE MEASURED (BACKGROUND LOCATION AND COMPLIANCE POINTS) EVERY 4 HOURS WHILE WORK IS BEING IMPLEMENTED.
- D. IF THERE IS A VISIBLE DIFFERENCE BETWEEN A COMPLIANCE POINT AND THE BACKGROUND, THE EXCEEDANCE WILL BE NOTED IN THE PROJECT COMPLETION FORM (PCF). ADJUSTMENTS OR CORRECTIVE MEASURES WILL BE TAKEN IN ORDER TO REDUCE TURBIDITY.
- E. IF EXCEEDANCES OCCUR FOR MORE THAN TWO CONSECUTIVE MONITORING INTERVALS (AFTER 8 HOURS), THE ACTIVITY WILL STOP UNTIL THE TURBIDITY LEVEL RETURNS TO BACKGROUND. THE BPA EC LEAD WILL BE NOTIFIED OF ALL EXCEEDANCES AND CORRECTIVE ACTIONS AT PROJECT COMPLETION.
- F. IF TURBIDITY CONTROLS (COFFER DAMS, WADDLES, FENCING, ETC.) ARE DETERMINED INEFFECTIVE, CREWS WILL BE MOBILIZED TO MODIFY AS NECESSARY. OCCURRENCES WILL BE DOCUMENTED IN THE PROJECT COMPLETION FORM (PCF).
- G. FINAL TURBIDITY READINGS, EXCEEDANCES, AND CONTROL FAILURES WILL BE SUBMITTED TO THE BPA EC LEAD USING THE PROJECT COMPLETION FORM (PCF).

25 (*****)

26
27 Clearing includes removing dead trees and shrubs and debris within designated clearing
28 limits. Dead trees cleared during the project shall be defined as "Usable Material" and
29 primarily used as slash incorporated into construction of Large Wood, Post Assisted
30 Roughness Structures, and Floodplain Roughness Zones. Any remaining usable material
31 shall be scattered on-site.
32

33 "Debris" means all unusable material produced by clearing or roadside
34 cleanup.
35

36 **2-01.2 Disposal of Usable Material and Debris**

37 Section 2-01.2 is revised to read:

38 (*****)

39
40 The Contractor shall dispose of all debris by one or more of the disposal methods described
41 below.
42

43 **1. Disposal Method No. 1 – Incorporation into Other Work**

44 Trees removed as part of the Work shall be incorporated as Slash concurrently with the
45 construction of Large Wood (8-27), Post-Assisted Roughness Structures (8-28), and
46 Floodplain Roughness Zones (8-32).
47

48 **2. Disposal Method No. 2 – Scatter**

After Disposal Method No.1 is completed, dispose of remaining Usable Material by scattering at areas identified by the Contract Representative such as decommissioned access routes and staging areas.

3. Disposal Method No. 3 – Waste Site

Cleared materials that are not wood, such as trash or metal debris designated by the Owner for removal shall be hauled to a waste site obtained and provided by the Contractor in accordance with Section 2-03.3(7)C.

2-01.3 Construction Requirements

Section 2-01.3 is supplemented with the following:

(*****)

2-01.3(1) Clearing

Clearing shall be removing dead portions of burned trees marked in the field by the Contract Representative to be reused on site as usable material to be incorporated into the work as Disposal Method No. 1, or as otherwise directed by the Contract Representative.

The lower portions of most of the burned trees are alive and sprouting new stems and leaves. Cut each burned tree near the base but above live branches. Remove the cut trees from clearing area and use at designated areas as Disposal Method No.1.

Zones of required Clearing are designated in the Plans for removing burned trees near the new bridge and culverts. Clearing areas outside of the required removal zone shall be cleared as needed to develop additional Slash to complete work in Disposal Method No.1.

Areas designated in the Plans as “Clearing - Restricted Impacts” are aspen regeneration areas where no heavy equipment shall be allowed, and where burned tree removal shall be by hand labor and small vehicles only. Remove the cut trees from the restricted impacts clearing area and use at designated areas as Disposal Method No.1.

Clearing limits shown in the Plans for “Clearing”, “Required Clearing”, and “Clearing - Restricted Impacts” are approximate, to be field-fit as directed by the Contract Representative. The quantities in the bid form for “Clearing” and “Clearing - Restricted Impacts” reflect the approximate areas shown in the Plans.

2-01.3(4) Roadside Cleanup

Section 2-01.3(4) is supplemented with the following:

(*****)

1. Decompact access roads and staging areas by scarifying the earth to a depth of 6 inches.
2. Scatter Usable Materials stockpiled as Disposal Method No.2 of Clearing.

2-01.4 Measurement

Section 2-01.4 is supplemented with the following:

(*****)

All clearing work includes installing Slash in other Work under Disposal Method No.1.
Installing Slash shall be incidental to clearing work.

“Clearing” will be measured per acre. “Clearing - Restricted Impacts” will be measured per acre. There is no unit of measurement for “Roadside Cleanup”.

2-01.5 Payment

Section 2-01.5 is supplemented with the following:
(*****)

“Clearing”, per acre

“Clearing - Restricted Impacts”, per acre

“Roadside Cleanup”, lump sum

2-03 ROADWAY EXCAVATION AND EMBANKMENT

2-03.1 Description

Section 2-03.1 is supplemented with the following:
(*****)

The Work includes Channel Excavation Incl. Haul for constructing channel finish grade or sub-grade where indicated in the Plans, and hauling excavated materials to Embankment Construction areas designated in the Plans. The Work includes Embankment Compaction for placement of fill to build berms or fill channels at areas indicated in the Plans. Common Borrow Incl. Haul refers to stockpiles of fill material that have already been delivered to the project site by others to be used as Embankment Construction areas designated in the Plans.

2-03.3(14) Embankment Construction

Section 2-03.3(14) is supplemented with the following:
(*****)

Embankment Construction shall be at fill areas designated in the Plans utilizing Earth Embankment materials sourced from Channel Excavation Incl. Haul or Common Borrow Incl. Haul that has been placed in stockpiles or hauled directly to placement areas. All materials used for Embankment Construction shall be considered Earth Embankment.

Embankment Construction areas are labeled in the Plans. Embankment Construction areas indicated in the Plans are designated for Earth Embankment from particular sources as follows:

Channel Excavation Incl. Haul	Embankment Construction
Constructed Riffle Subgrade – 8,520 cy	Floodplain Berm – 8,520 cy
Connector Channel 1 – 1,850 cy	Floodplain Berm – 1,850 cy
Connector Channel 2 – 800 cy	Floodplain Berm – 800 cy***
Connector Channel 3 – 600 cy	Center Channel Plug – 600 cy

Toppenish Creek Gravel Harvest - 2,430 cy	Channel Sediment Augmentation – 2,430 cy
Common Borrow Incl. Haul	Embankment Construction
Common Borrow Type 1 - 30,000 cy*	South Canal Plug – 30,000 cy
Common Borrow Type 2 - 2,000 cy**	South Canal Plug – 2,000 cy

* Common Borrow Type 1 is sourced from off-site, named “3 Way Spoils”, and stockpiled in 2025 near the South Canal Plug site. 3 Way Spoils shall only be used as Embankment Construction of South Canal Plug. The volume of Common Borrow Type 1 is approximately 30,000 loose cubic yards. A measurement of the fill pile will be made prior to construction.

** Common Borrow Type 2 is surplus fill sourced from on-site excavations from bridge, road, and culvert construction by others and stockpiled in 2025 on site. The Owner will survey to measure Common Borrow Type 2 fill piles prior to use. Common Borrow Type 2 shall be used as Embankment Construction of South Canal Plug or, if needed, as supplemental fill to achieve compacted finish grade of the Floodplain Berm.

***From surface subtraction methods of designed cut and fill areas, 11,170 in-place cy are to be used for the Floodplain Berm, which is 9,530 in-place cy. Therefore, approximately 1,640 in-place cy of surplus fill has been calculated. This is available for compaction “shrink” when constructing the Floodplain Berm.

After completion of all Embankment Construction Areas, any remaining fill material shall be disposed of on-site as Earth Embankment at the South Canal Plug. There will be no measurement for surplus fill.

2-03.3(14)C Compacting Earth Embankments

Section 2-03.3(14)C is supplemented with the following:

(*****)

The Contractor shall use Earth Embankment Compaction Method A.

2-03.3(14)F Vacant

Section 2-03.3(14)K is replaced with the following:

(*****)

2-03.3(14)F Grading

Grading areas include local excavation and fill to improve a channel connection, or to decommission a 2-track dirt road by leveling the ground by scraping high areas to fill low areas.

2-03.3(14)K Select or Common Borrow Including Haul

Section 2-03.3(14)K is supplemented with the following:

(*****)

The Contractor shall install Common Borrow meeting the requirements of 9-03.14(3) unless otherwise approved by the Contracting Agency. Soil plasticity index testing and requirements will not apply.

2-03.4 Measurement

Section 2-03.4 is supplemented with the following:

1 (*****)

2
3 Hauling Earth Embankment to Embankment Construction areas shall be incidental to
4 Channel Excavation Incl. Haul or Common Borrow Incl. Haul bid items.

5
6 "Grading" will be measured by the cubic yard.

7
8 All excavated material will be measured in the position it occupied before the excavation
9 was performed. The original ground will be compared with the planned finished section
10 shown in the Plans. Slope/ground intercept points defining the limits of the measurement will
11 be as staked, or as approved by the Owner.

12
13 No additional measurement will be made for material that is stockpiled, re-excavated, and
14 moved again.

15
16
17 **2-03.5 Payment**

18 Section 2-03.5 is supplemented by the following:

19 (*****)

20
21 "Channel Excavation Incl. Haul", per cubic yard.

22 "Common Borrow Incl. Haul", per cubic yard.

23 "Grading", per cubic yard.

33 (*****)

34
35 Stabilized construction entrances will be measured by the square yard by ground slope
36 measurement for each entrance constructed.

37
38 ESC lead will be measured per day for each day that an inspection is made and a report is
39 filed.

40
41 There will be no measurement for Water Management.

42
43 **8-01.5 Payment**

8-02.3(8)B Plant Installation

Section 8-02.3(8)B is revised as follows:

(*****)

The Contractor must coordinate with the Owner for live cutting delivery and storage to ensure that cuttings do not desiccate (dry out) before planting. No more cuttings than can be planted within 24 hours after removal from storage shall be delivered to an installation location. Live cuttings that are not used in a day shall be wrapped in wet burlap sacks and stored in a location with an air temperature between 37 °F and 65 °F until the next planting day or returned to storage.

Cuttings shall be properly stored. If cold storage is necessary, the collected and soaked cuttings shall be stored for no more than an additional 10 days at 37 °F to 41 °F until planting. After the cuttings have been removed from cold storage, they shall be soaked for no more than another 5 days to complete soaking and ensure hydration before and after storage. Materials shall be in accordance with sections 9-03.11 of the standard specifications, and as amended by these special provisions.

8-26.1(1) Definitions

Blended Streambed Aggregate - Blended streambed aggregates are defined as a mix of the aggregates with the associated ratios in accordance with 8-26.2(2).

8-26.2 Materials

8-26.2(1) Streambed Aggregates

Streambed Aggregates shall be in accordance with 9-03.11

8-26.2(2) Constructed Riffle

Constructed Riffle material shall be a mixture of Streambed Aggregates meeting the material requirements set forth in standard specification 9-03.11, and having the following gradation:

Percent Smaller	Diameter (in)	
	min	max
100	22.9	25.9

Material larger than 18" diameter shall be angular or sub-angular. Material sized 12-17" diameter may be angular, sub-angular, or rounded.

8-26.2(3) Streambed Boulders Type Four

Streambed Boulders Type Four shall be as described in 9-03.11(5).

8-26.3 Construction Requirements

8-26.3(1) Streambed Preconstruction Conference

A streambed preconstruction conference shall be held at least seven (7) calendar days prior to the Contractor beginning streambed construction. The Contractor shall notify the Contract Representative fourteen (14) calendar days prior to the meeting taking place and should indicate within the notice if they intend to evaluate native streambed materials for use on the project. The purpose of the meeting is to discuss the goals, objectives, intent, streambed construction procedures, critical functions during stream work, potential use of native streambed excavation materials, quality control steps to control mixing ratios, personnel, equipment to be used, and other elements of construction.

Those attending shall include:

1. (Representing the Contractor) The superintendent or on-site supervisors, the Environmental Compliance Lead and other personnel or subcontractors that will have on-site responsibility for in-channel streambed Work.
2. (Representing the Contracting Agency) The Contract Representative, Owner, and other key staff as appropriate will be invited by the Contracting Agency.

8-26.3(2) Mixing of Streambed Aggregates

Streambed aggregates will be separately tested and accepted by the Contract Representative prior to delivery, placement in a stockpile or blending activities.

After acceptance by the Contract Representative, streambed aggregates shall be thoroughly blended before placement. Acceptance of the final mixture of blended streambed aggregate will be based upon visual inspection by the Contract Representative.

Native streambed aggregates may be available from the existing channel grading limits as shown in the Contract Plans. Components of the excavated streambed which meet the criteria for the specific material may be used to supplement imported streambed aggregates. The Contractor shall be responsible for any costs associated with separating, stockpiling, hauling, and handling excavated native streambed aggregates for incorporation into the blended aggregate mixes.

If the Contracting Agency grants access to the off-site spoils pit near Toppenish Creek, the engineer will pre-approve suitable borrow areas. If the Contractor elects to use this borrow, the contractor is responsible for sorting and mixing the spoils pit material with imported larger coarse rock to meet the gradation requirements.

8-26.3(3) Construction Stakeout

Prior to placement of streambed aggregates, the Contractor shall clearly establish stakes or references which depict the finished channel bed elevations, lines, and grades as shown in the Plans including offsets and intermediate breaklines at regular intervals to clearly define the finished surface of the Constructed Riffle.

The Contractor may elect to utilize a single set of construction stakes for both sub-grade preparation and Constructed Riffle construction. If a single set of stakes is utilized, the stakes shall be inspected and refreshed or re-established as necessary following sub-grade preparation.

1 The Contract Representative will review construction stakes following preparation of the
2 sub-grade and prior to placement of any Streambed Aggregates. The Contractor shall
3 closely coordinate the Work with the Contract Representative and shall make allowances
4 within the schedule of Work to allow for inspection of the prepared sub-grade prior to placing
5 Streambed Aggregates. Construction stakeout points will be provided by the Contracting
6 Agency; the Contractor shall be responsible for generating and staking out sufficient offset
7 stakes necessary to allow for ready inspection of the Work. Digital data will also be available
8 should the Contractor choose to generate additional stakeout points or utilize machinery
9 equipped with GPS-assist.

10 11 **8-26.3(4) Placement of Streambed Aggregates**

12 13 **8-26.3(4)A Stockpiling Aggregate**

14 Streambed aggregates, as described above, shall be blended into single well-graded
15 stockpiles separate from other aggregates.

16 17 **8-26.3(4)B Placing Blended Streambed Aggregates in Streambed**

18 Blended streambed aggregate shall be placed in the prepared channel excavation to the
19 lines and grades shown on the Plans and in such a way as to prevent material segregation.
20 Blended streambed aggregate shall be placed in lifts no thicker than 12 inches. Blended
21 streambed aggregate in its final location shall be a well graded mix.

22
23 Placement of blended streambed aggregate shall be constructed to ensure that a flow rate
24 of 30 gallons per minute is conveyed above each channel lift. The Contractor shall apply
25 water at 30 gallons per minute and Streambed Sand to facilitate filling the interstitial voids of
26 the blended streambed aggregate. Adjustment of the flow rate may be required to ensure
27 that the voids are satisfactorily filled. The voids are satisfactorily filled when the 30 gallons
28 per minute flow rate does not go subsurface and there is no perceivable difference in the
29 flow rate from upstream of the project limits to the downstream of project limits. The
30 Contractor shall apply water at the 30 gallons per minute flow rate to the stream channel for
31 visual acceptance by the Contract Representative. Water shall be free from contaminants,
32 chlorination and additives that have the potential to pose a risk to fish and other ecological
33 life.

34 35 **8-26.3(4)C Placing Blended Streambed Aggregates in Streambank**

36 Blended streambed aggregate placed in the streambanks shall be placed in lifts no thicker
37 than 12 inches. The Contractor shall compact each lift to be uniformly dense and unyielding
38 as approved by the Contract Representative.

39
40 Larger individual clasts making up the blended Rock Riffle aggregate mix shall project 30%-
41 50% of the diameter of the clast above the finished grade of the streambed to provide
42 hydraulic variability and increased surficial roughness.

43
44 While constructing the top lift of the Constructed Riffle, the Contractor shall selectively place
45 larger particles with a diameter greater than approximately 12-inches for use in forming the
46 banks of the finished channel. Particles greater than 12-inches shall be placed strategically
47 as directed by the Contract Representative to form a stable bank with maximum contact
48 between individual particles as the design gradation allows. Minor adjustments to the
49 finished channel bed may be required based on site specific conditions; any such
50 modifications will not result in appreciable changes to overall shape or elevation of the
51 finished channel bed.

1
2 **8-26.3(4)D Placing Streambed Boulders**

3 Streambed Boulders shall be placed at locations directed by the Contract Representative.
4 Place boulders before applying smaller streambed aggregates so that each boulder is
5 partially buried.
6

7 **8-26.3(4)E Additional Streambed Grading**

8 Minor adjustments to the finished channel bed may be required based on site specific
9 conditions to transition to existing ground, or to develop a low-flow channel and small pools
10 and bars.
11

12 **8-26.4 Measurement**

13 Blended Streambed Aggregates shall be measured by the cubic yard furnished and placed
14 for Riffle Construction as described in this section. Streambed Boulders will be measured
15 per each.
16

17 **8-26.5 Payment**

18 Payment will be made for each of the following Bid items that are included in the Proposal:
19

20 "Constructed Riffle", cubic yard

21 "Streambed Boulders Type Four", per each
22

23 The unit Contract price per cubic yard for "Constructed Riffle", and "Streambed Boulders
24 Type Four" shall be full payment for all costs to perform the Work as specified including
25 blending and placement of streambed aggregates, and watering in each lift, including supply
26 and application of streambed sand and water to facilitate filling the interstitial voids.

37 necessary to install Large Wood in accordance with the Plans, Standard Specifications, and
38 these Special Provisions. Large Wood locations and configurations will be based upon the
39 locations shown in the Plans; however, final placement shall be considered fit-in-the-field
40 and may be adjusted by the Contract Representative. Logs shall be arranged, placed,
41 and/or buried as indicated in the Plans or directed by the Contract Representative. The
42 Contractor shall understand that because of the irregularities of natural logs, adjustments to
43 log placements will be needed, and additional payment will not be made.
44

45 **8-27.2 Materials**

46 Large Wood will consist of logs with attached roots. Species shall be Douglas fir, Spruce,
47 Larch, Grand fir, or Western Red-Cedar. Pine is not acceptable. Each log with attached
48 roots shall have the following dimensions:
49

50 Length = 40 feet;

51 Diameter at breast height (DBH) greater than 15 inches.

Slash shall be comprised of trees, limbs, branches, and other woody debris developed for "Disposal Method No.1" of Clearing (2-01.2).

8-27.3 Construction Requirements

The Contractor is encouraged to carefully examine the Plans to provide equipment best-suited for installation of Large Wood. Difficult construction conditions shall not be grounds for additional compensation as part of this Contract.

At all times when Large Wood is being handled, loaded, unloaded, and placed, the Contractor shall exercise care to minimize damage to the log, branches, and roots. Each log with roots shall be handled by grasping the bole of the log; transporting or lifting log by grabbing the rootwad with an excavator bucket or similar equipment can damage roots and shall not be allowed without permission from the Contract Representative.

The Contract Representative may direct the Contractor to incorporate available slash material generated through on-site clearing into Large Wood structures, either intertwined with logs or mixed with backfill.

The Contractor shall place Large Wood and slash, generally as shown on the Plans but with field-fit placement and adjustment. Placing Large Wood requires careful manipulation of large and small pieces of wood. The Contract Representative may request adjustments during placement of Large Wood.

The Contractor shall perform any excavation necessary for installation of Large Wood as part of the Work. Excavated material shall temporarily be staged adjacent to the Work area. Excavated material shall be backfilled following placement of Large Wood and slash (as directed by the Contract Representative). Backfilled material shall be placed in lifts of not more than 18 inches and compacted with the bucket of an excavator or similar means.

The Contract Representative may direct the Contractor to cut or break logs to facilitate field-fit installation of Large Wood.

All costs associated with slash placement shall be made incidental to the Clearing bid item.

8-27.4 Measurement

"Large Wood" will be measured per each.

Installation of Slash is incidental to Clearing.

8-27.5 Payment

"Large Wood", per each.

The unit contract price paid for "Large Wood" shall include full compensation for furnishing all labor, materials, tools, equipment and incidentals for completing all Work required for installation as described in the Plans and these Special Provisions which may include, but is not limited to the following: temporary staging of woody material; hauling, and placement of any additional necessary materials as shown on the project plans; excavation and backfill associated with placement of Large Wood, placement of Large Wood and slash, and other

work that may be needed. No payment shall be made until the Contract Representative has reviewed and approved a completed all Large Wood placements. Any deficiencies noted shall be the responsibility of the Contractor and payment will not be released until the noted deficiencies are addressed to the satisfaction of the Contract Representative.
